A new family of basic cysteine-rich plant antifungal proteins from
Brasslacaceae species.";
FBBS Lett. 316:233-240(1993).
-!- FMDVTION: Possesses some antifungal activity sensitive to
inorganic cations and antibacterial activity against B.megaterium.
-!- SUBUNIT: Forms oligomers in its native state.
-!- SINTLARITY: Belongs to the plant defensin family.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    Bukaryota, Viridiplantae; Streptophyta; Embryophyta; Tracheophyta;

Pred. No. is the number of results predicted by chance to have a

em\_htgo\_mus:\* em\_htgo\_other:\*

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
